

ENZYME MAX

Approved Input for Organic Production!

Enzyme Max is an approved input for organic production. It is an affordable and powerful product that alleviates the effects of compaction, increases nutrient uptake and promotes healthier plant growth.

This product is an advanced composition of minerals, essential nutrients, humic acids, and beneficial microbes. Enzyme Max contains 36 strains of live microbes, which are dormant until applied to the soil.

- Alleviates the effects of compaction
- Increases nutrient uptake and promotes healthier plant growth
- Contains 36 different strains of live microbes.
- Suspended in humic acid
- Available in numerous container sizes
- Low per acre cost

RECOMMENDED APPLICATION:

We recommend applying Enzyme Max during early growth stages and also at 3rd trifoliolate for soybeans, V3 - V7 on corn, and at boot and flag leaf on wheat.

Recommended Application: 12.8 ounces per acre

Visit our website to view recent soybean, corn and wheat data from Enzyme Max.

GUARANTEED ANALYSIS: 9.6 lb per gallon

Microbes.	30%
Humate.	10%
Seaweed Extract.	5%
Iron Chelated water base	4%
Manganese water base	4%
